OB ICD-10 Coding Tips

Pregnancy Test

When performing a pregnancy test, the **outcome** of the test is used to select the appropriate ICD-10 code when entering the order.

The **Pregnancy Test Order Details** tab contains the ICD-10 diagnosis result codes. These diagnosis codes **do not** need to be added to the Problem list. This is consistent with the process prior to ICD-10.

Update Orders - Mrs. Annabelle K. zzzzTest 59 Years Old Female, (DOB: 04/08/1956)

Supervision of Normal Pregnancy

In ICD-9, there were only two codes used for the supervision of normal pregnancy:

- V22.0 supervision of normal **first** pregnancy
- V22.1 supervision of normal **other** pregnancy

In ICD-10, these categories are further subdivided based on **trimester** as follows:

- Z34.01 supervision of normal **first** pregnancy, **first** trimester
- Z34.02 supervision of normal **first** pregnancy, **second** trimester
- Z34.03 supervision of normal **first** pregnancy, **third** trimester
- Z34.81 supervision of normal **other** pregnancy, **first** trimester
- Z34.82 supervision of normal **other** pregnancy, **second** trimester
- Z34.83 supervision of normal **other** pregnancy, **third** trimester

When billing prenatal visits associated with a normal pregnancy, the provider needs to search for and select the appropriate diagnosis code from the list.

Search

Search for: nor fir preg

Using:

Using:	ICD-9	ICD-10
Supervision, normal first pregnancy	V22.0	Z34.00
Supervision of normal first pregnancy, first trimester	V22.0	Z34.01
Supervision of normal first pregnancy, second trimester	V22.0	Z34.02
Supervision of normal first pregnancy, third trimester	V22.0	Z34.03

Encounter for Supervision of High-Risk Pregnancy and/or Complication in Pregnancy

As with ICD-9, any encounter for supervision of a high-risk pregnancy and/or a complication in pregnancy should be assigned primary codes that are specific to pregnancy. The condition/complication is often coded as a secondary code.

The major change with ICD-10 is the **specification** of the **trimester** along with the gestational weeks. It is important to be as specific and complete as possible when assigning the diagnosis codes.

As an example, if a patient has Type 1 diabetes and is 27 weeks pregnant, the correct ICD-10 code assignment is as follows:

- O24.012 Diabetes, Type 1, in pregnancy, **second trimester**
- E10.9 Diabetes, Type 1, without complications
- Z3A.27 Gestation of Pregnancy **27 weeks**

Add each as a **separate** problem in Centricity:
