Updating Problems with ICD-10 Codes using Smart Search

ICD-10 codes are required for any orders processed on or after October 1, 2015.

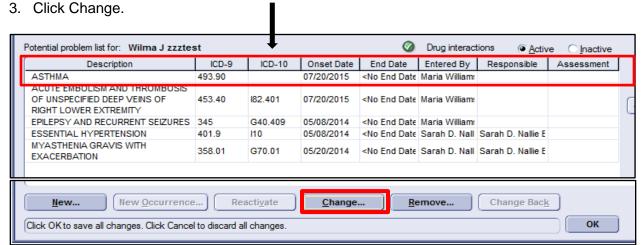

When there is not a 1:1 conversion from ICD-9 codes to ICD-10 codes steps need to be taken in Centricity to add ICD-10 codes to Problems.

Orders given to patients <u>prior</u> to October 1, 2015, which may not be completed until <u>after</u> October 1, 2015 <u>need</u>:

• Diagnoses updated in Centricity to include the ICD-10 code for display on the order slip to prevent delays in order processing.

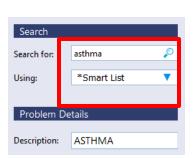

To update problems to include ICD-10 codes:

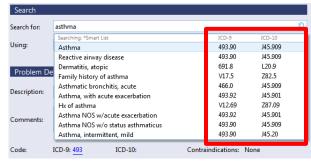

- Click Update Probs.
- 2. Highlight the code without the ICD-10 code.

Part 1 - Search Using *Smart List

1. Using the *Smart List function, begin typing a Search term that corresponds to the problem. 'asthma' is used in this example.

2. Results are returned that have both an ICD-9 code and an ICD-10 code.

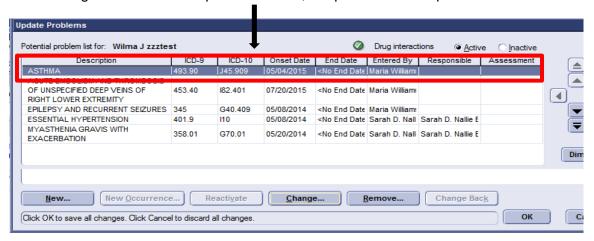

Note: A maximum of 20 results will display in the Smart Search at one time.

3. If the none of the results displayed correctly define the problem, click the **magnifying glass** to see the full list of results for the search term.

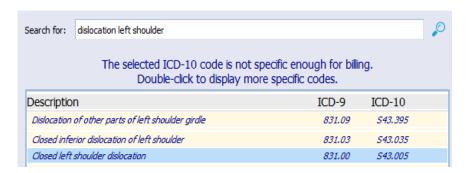

Centricity Tip Sheet

4. After selecting the correct description and code, the problem list is updated with an ICD-10 code.

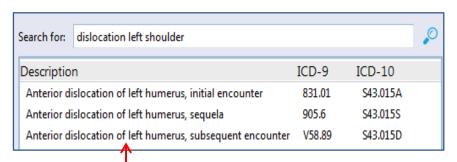

Part 2 – Search Results Returning Non-Specific Diagnoses

 When using the magnifying glass to search for a full list of results, results may be returned with 'blue, italicized' font. These code results are not specific enough for ICD-10 billing purposes.

2. Double-click the **blue**, **italicized** term that best describes the problem to see a list of codes that have the level of specificity needed.

Select the description and code with the correct laterality, type of encounter, stage, etc.

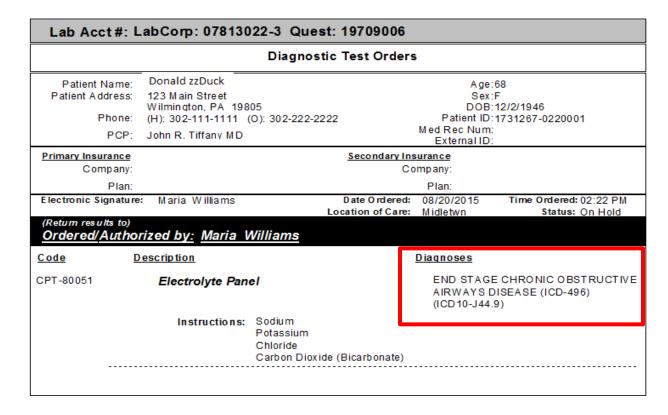

August 2015

Part 3 – Updating Orders with ICD-10 codes

- 1. Select the correct order for the patient via Orders.
- 2. Link the appropriate problem to the order.
- 3. If the problem (diagnosis) is listed in **Orange** font, this means it is missing an ICD-10 code or it is not specific enough.

- 4. Highlight the diagnosis and click **Change**.
- 5. This will take you to the Smart Search where you can search for the correct description and code.
- 6. The order slip should contain both the ICD-9 and the ICD-10 codes.
