

PowerChart Tip Sheet

ICD-10 Transition: Physician Charges and Discharge Orders
September 30, 2015

Important ICD-10 Transition Instructions pertaining to patients admitted PRIOR to October 1st.

Beginning October 1, 2015:

For any problems entered **prior** to 10/1/15, the Consolidated Problems component in documentation workflow will **NOT** show the ICD-10 specificity indicator because all of the existing problems will still be mapped to ICD-9.

- **IMPORTANT:** While you are not required to convert all problems, there are two scenarios which require you to convert problems from ICD-9 to ICD-10.
 - **Physician Charge Capture** (only providers performing physician charging in Powerchart)
 - **Discharge Order** (all providers)

(All problems entered prior to 10/1 remain unchanged and are ICD-9. No specificity indicator)

Name	Classification	Actions
1 - Hypotension	Medical	This Visit Chronic
2 - Atrial fibrillation, rapid	Medical	This Visit Chronic
3 - ESRD on dialysis	Medical	This Visit Chronic
4 - Sleep apnea	Medical	This Visit Chronic
5 - Non-ischemic cardiomyopathy	Medical	This Visit Chronic
6 - Asthma	Medical	This Visit Chronic Resolve
7 - Scleroderma	Medical	This Visit Chronic
8 - Hyperkalemia	Medical	This Visit Chronic

ALL NEW CODES entered on 10/1/15 and beyond will **automatically** default to **ICD-10** and **will show** the exclamation icon if the code does not meet **ICD-10 specificity**. Clicking on the exclamation point will launch Diagnosis Assistant tool.

(Same problem list entered on a new patient as of 10/1. All problems are now ICD-10 and show the specificity indicator.)

Name	Classification	Actions
1 - ! Hypotension	Medical	This Visit Chronic
2 - ! Atrial fibrillation, rapid	Medical	This Visit Chronic
3 - ! ESRD on dialysis	Medical	This Visit Chronic
4 - ! Sleep apnea	Medical	This Visit Chronic
5 - ! Non-ischemic cardiomyopathy	Medical	This Visit Chronic
6 - ! Asthma	Medical	This Visit Chronic Resolve
7 - ! Scleroderma	Medical	This Visit Chronic Resolve
8 - ! Hyperkalemia	Medical	This Visit Chronic

ICD-10 Transition: Physician Charges and Discharge Orders
September 30, 2015

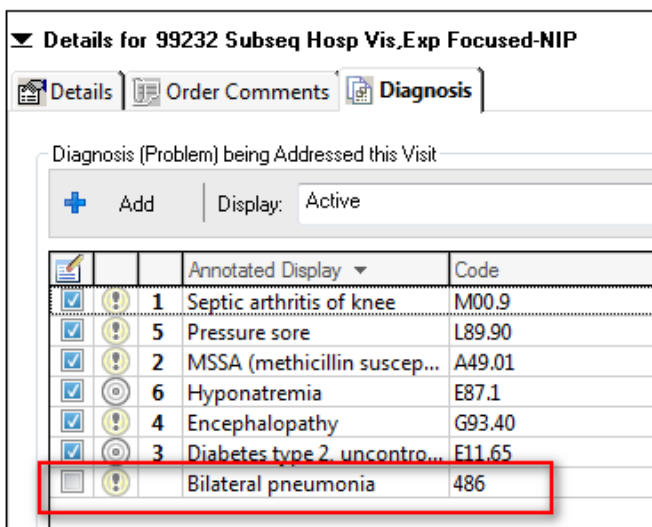

ICD-9 to ICD-10 Conversion Requirements

Scenario 1: Physician Charge Capture

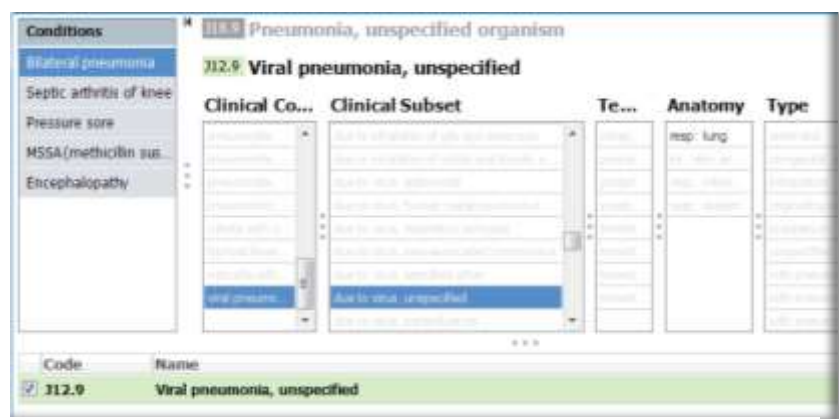

Providers who perform PowerChart Physician Charge Capture will be required to convert existing ICD-9 Dx to ICD-10 Dx.

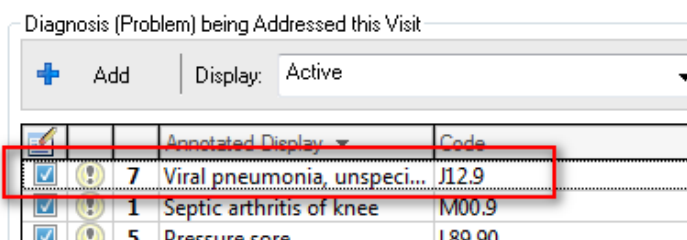

- If selected ICD-9 diagnoses have a one-to-one ICD-10 match, the ICD-10 code will automatically be added and selected.
- If selected ICD-9 diagnoses do not have a one-to-one ICD-10 match, use Diagnosis Assistant to assist you in choosing the appropriate ICD-10 code. (Click on exclamation point to open DA tool)
- The new ICD-10 diagnoses will be added to bottom of the Consolidated Problem list.

In this example, the ICD-9 code for Bilateral pneumonia (486) did not have a one-to-one ICD-10 match so the ICD-9 code still displays.

Clicking on the exclamation point next to the Problem will open Diagnosis Assistant. This will guide you through choosing the appropriate ICD-10 code, which will be added to the list.

PowerChart Tip Sheet

ICD-10 Transition: Physician Charges and Discharge Orders
September 30, 2015

- **IMPORTANT:** Remove the old ICD-9 diagnoses as these will cause duplicates in your Notes if they remain.

ICD-10 Transition: Physician Charges and Discharge Orders
September 30, 2015

Scenario 2: Discharge Order

All Providers will be required to convert their discharge diagnoses to ICD-10 with their Discharge Order.

Step 1:

Manually select which diagnoses you wish to include as the **discharge diagnoses**.

Step 2:

These will convert to ICD-10 as seen below.

NOTE: If you need to write a note on the patient's chart after placing the discharge order, you may see duplicate problems in your note. If so, you can remove them by following the [directions on page 3](#).
