

## How do I customize existing specialty Dragon commands?

Some commands have already been created for your specialty and you can modify and customize those commands (macros) to suit your needs.

1. Open Dragon.
2. On the Dragon toolbar, click **Tools** and select **Command Browser** or say "Command Browser". The Command Browser window opens.
3. Click **Command Sets**.
4. Select your specialty folder.
5. Right click on the Command name (macro) you wish to modify.
6. Select **New Copy**.
7. The My Commands Editor dialog box appears.
8. You can change the name of the command in the My CommandName field.
9. Modify any of the existing information in the Content section.
10. Leave the Plain Text box checked.
11. When finished, click **Save**.
12. The new, saved copy will be located under Modes>MyCommands in the Task Pane, in the same folder name.

## How do I make my own auto-text?

For every Dragon Command, an auto-text has been configured, but you can create your own customized auto-text as well.

1. In **PowerChart**, open the Documentation workflow to a text field.

2. From the text editor toolbar, click the **Manage Auto Text** button.

3. On the Manage Auto-text window, click the icon for **New Phrase**.

4. Enter an abbreviation and description for your text in the Abbreviation and Description boxes.

5. Click the **Add Text** icon.

6. The Formatted Text Entry window opens. Enter your text entry in the HTML section (bottom section) of the Formatted Auto Text dialog box.

7. Click **OK**.

8. Click **Save**, then click **Close**.
